scholar.harvard** - there is a race being run in the extreme tail between how rapidly probabilities are declining and how rapidly damages are increasing. who wins this race, and by how much, depends on how fat (with probability mass) the extreme tails are. it is difficult to judge how fat the tail of catastrophic climate change might be because it represents **fat-tail distributions and business-cycle models** - this paper draws on extreme value theory to frame the question of fat tails and study how tail characteristics vary between markets and regions. fat tails are consistent with a variety of financial theories. herding theories rely on asymmetric or noisy information to create cascades in particular directions resulting in the clustering of ... **monte carlo methods in finance using fat tail models** - this fat tail implementation provides a consistent technique that 1) mimics the majority of the most common returns as provided by the normal distribution, and 2) better models the occurrence of very unusual and extreme outlying events not sufficiently represented by the normal distribution. a fat tail example (a) without fat tails. **package 'fattailsr' -
